The amendment of 8/20/03 amended claims 1, 2, 5 and 8, and canceled claims 25 and 26.

Claims 10-24 and 27-54 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b) as being drawn to a non-elected invention. Election was made without traverse in Paper No. 11 filed 2/27/03.

Claims examined on the merits are 1-9.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

### Claim Rejections - 35 USC § 112

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are confusing and unclear by claim 1 not having antecedent basis for "free" recited in line 4. It is suggested that --- free --- be inserted before "low" in line 2. Additionally, in line 4, "free" should be deleted and reinserted before "low".

### Claim Rejections - 35 USC § 103

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wollowitz et al (5,593,823) in view of Tsyurupa et al (193 on form 1449) and Davankov et al (110 on form 1449) for reasons set forth in the previous office action of 5/20/03.

Method claims 1-9 are drawn to removing a free low molecular

25 psoralen compound from a blood product by contacting the blood product

with a hypercrosslinked resin to remove at least substantially all of
the free psoralen compound.

Wollowitz et al disclose adding psoralen compounds to inactivate pathogens in blood products, or blood products in synthetic media (col 1, line 17, and col 3, line 41) containing phosphate (col 5, line 29), irradiating and then removing free psoralen compounds from the blood with various adsorptive materials (col 53, lines 46-64) including Amberlite XAD-4 (col 53, line 50).

Tsyurupa et al and Davankov et al disclose using hypercrosslinked polystyrene-divinylbenzene copolymers for sorption and removal of a variety of organic compounds from aqueous mediums. The hypercrosslinked copolymers have exceptional high adsorption capacity. For example, see Tsyurupa et al (page 69, right col, lines 14-17, and page 70, left col, lines 6-10).

It would have been obvious to substitute for the Amberlite XAD-4 adsorbent resin of Wollowitz et al, the hypercrosslinked polystyrene-divinylbenzene copolymer taught by Tsyurupa et al and Davankov et al for the expected advantage of the hypercrosslinked copolymer providing exceptional adsorption capacity. Since both Amberlite XAD-4 and the hypercrosslinked copolymer are polystyrene-divinylbenzene copolymers and are essentially the same except for hypercrosslinking, it would have been expected that the hypercrosslinked copolymer would provide the sorption function of Amberlite XAD-4 required by Wollowitz et al of removing free psoralen compounds from treated blood or synthetic blood media.

## Response to Arguments

It is granted as urged by applicants that Wollowitz et al does not disclose a deficiency in the XAD-4 adsorbent used. However, Wollowitz et al is not applied alone but in combination with the

Tsyurupa et al and Davankov et al references which disclose using a hypercrosslinked polystyrene-divinylbenzene copolymer because of its exceptionally high adsorption capacity. Tsyurupa et al show a comparison with XAD-4 (Tables 4, 5 and 6), and found that the hypercrosslinked copolymer has superior adsorption capacity. Therefore, the hypercrosslinked copolymer would have been expected to be advantageous in Wollowitz et al by providing superior adsorption capacity.

### Double Patenting

Claims 1-9 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 53-110 of copending Application No. 09/972,323 or claims 53-115 of copending Application No. 10/011,202. Although the conflicting claims are not identical, they are not patentably distinct from each other because the presently claimed invention would have been obvious from the claims of the copending applications drawn to using an adsorbent material which can be a hypercrosslinked resin to remove psoralen compounds from blood products.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

#### Response to Arguments

Applicants assert that because of notice of appeals and briefs

being filed in the copending applications, they do not expect the

copending applications to issue prior to the present application.

However, since no claims have been allowed in this application, whether this application will issue before or after the copending applications cannot be determined.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David M. Naff whose telephone number is 703-308-0520. The examiner can normally be reached on Monday-Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mike Wityshyn can be reached on 703-308-4743. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
